Replacing ALL your Teeth

Price Guide for Replacing ALL Your Missing Teeth

We all want to smile and eat great food. If you are missing all your teeth or know that you will lose your remaining teeth soon, these solutions are available to help keep you smiling and eating the food you love.

Option 1:

A Complex Full Arch Bridge

This is reserved for younger individuals with some remaining teeth and healthy bone. The goal is to preserve as much of the natural appearance as possible utilizing 8 to 10 implants. The treatment requires coordination between our office and specialists with treatment cost totaling \$50,000-\$65,000 per jaw. A denture may be required in the healing steps. The process takes 12-24 months.

Comfort and chew rating 9.5 out of 10.

Option 2:

All on 4 Same Day Smile

The same day smile is the most popular option! Patients of any age are a good candidate for this option which provides a result almost identical to option 1, but at half the price. The teeth are permanent and do not come out. Utilizing our modern technology and 4-6 implants, you never go without teeth. It can be completed at our office; no trips to the specialist are needed. Total cost is \$27,000-\$32,000 per jaw.

Comfort and chew rating: 9.5 out of 10.

Option 3:

Implant Supported Snap-In Denture

This is also a popular option and huge improvement over regular loose dentures. This option utilizes implants with snaps to stabilize the denture preventing it from moving while you are eating or while talking in public. With a top denture, the palate can be removed so that your tongue can feel the roof of your mouth again. A regular denture is worn during the 5-6 months of healing. Total cost for the bottom teeth is \$7000-\$8800. Total cost for top teeth is \$14,000-\$20,000.

Comfort and chew rating 6.0 out of 10

Option 4:

A regular removable denture

This is the traditional option. Expect a bulky lip and no way to chew the food you love. It is removable and sometimes it removes itself creating an embarrassing moment. The top denture utilizes suction and denture glue to stay in place. The bottom denture does not stay in place even with the use of denture glue. Many people wear their bottom denture for social occasions only. The price of the denture is about \$1400 per jaw plus the price of extractions depending on how many teeth you have remaining. Our goal is the best denture possible made specifically for you using durable high quality denture teeth. Like with all our options, you get to pick out the color of your new teeth creating the smile that best fits you.

Comfort and chew rating 1.5 out of 10
